

Digital Downtown net

Free Downtown Gainesville Wireless Internet Access

Now you can access the Internet with a wireless network card for free, and once you are connected, you can surf the web, check email or do research while roaming through the coverage area in Downtown Gainesville.

Coverage Map

What you need to connect

You must have a notebook PC or Pocket PC with a wireless network card in order to pick up the signals from our antennas. The card must be 802.11b Wi-Fi compliant. Use your owner's manual to install your wireless network adapter, as each device is different.

Connecting to our Service

Once you are in our coverage area, set up your PC or Pocket PC to receive a dynamic IP address and DNS. Once you have done this, the Digital Downtown server can assign you an IP address and Domain Name Server to use, which will allow you to get online.

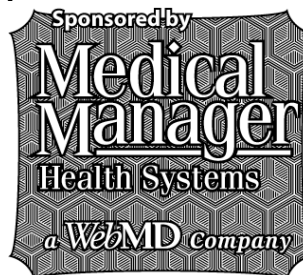

Roaming

While you can use our service without setting an SSID (network identifier) on your wireless card, we recommend setting your SSID to "digital downtown." This will prevent you from accidentally accepting a different wireless signal and losing your connection.

Instructions on how to configure your SSID vary depending on your device; refer to your wireless card documentation for specific instructions. See our Coverage Map to see where our service extends.

Support
